

Turn to InnovaCast for the most innovative system of molds.

The people behind **InnovaCast**, Inc have not only been involved in the design and installation of wetcast & stone veneer machinery, but of equal importance is our expertise in actually running these plants and producing high quality products. The team at **InnovaCast** have been involved in concrete product manufacturing for over 30 years and understand how significant it is to have the right molds to increase product detail, lower waste, maximize investment dollars and operate your plant efficiently and at a profit.

Let us use our knowledge and experience to improve every aspect of your business.

When it Comes to Stone Veneer Molds

What feature is MOST important to you?

If the answer is "all of them," then **InnovaCast** is the *only* mold for your company.

	Latex	Polyurethane	Plastisol	
Quality /Detail	A	B	C	A
Lifespan	C	A	C	A
Total Cost	C	C	B	A
Overall Rating	C+	B	C	A 

Our new **InnovaCast** molds provide the detail of latex molds, the durability and life span of polyurethane molds, and have a cost just slightly more than molds made with plastisol; in essence, providing the producer with the best of all worlds. *Manufactured stone veneer and wetcast producers will no longer need to make a choice between high quality, low cost and high durability when designing their products and factories.* Using a proprietary material known as **TEP**, these molds will have an incredibly positive impact on a stone veneer or wetcast producer's ability to increase sales revenue, reduce operating costs and simultaneously improve efficiency.

The new **InnovaCast** molds have been field tested in a number of facilities around the country and have taken what has typically been a simple expense item, and elevated it to one that can positively impact not just manufacturing, but total profitability.

InnovaCast Molds provide the necessary strength, highest detail, and unprecedented mold and pigment release. **InnovaCast** molds can be made in either a skin mold or a block (solid) mold to best suit your product and manufacturing application.

Primary Benefits of **InnovaCast** Molds made with **TEP** :

- Minimal or no release agent required to demold the product
- Stronger and more resistant to UV light, resulting in increased life expectancy
- Skin molds can be repaired and put back into production within 24 hours
- Our raw material is environmentally friendly with no hazardous concerns and the ability to be recycled

Contact us today to see how we can bring efficiency and labor savings to your stone veneer or wetcast manufacturing plant!
